

Netronome Named a Finalist for the 2010 Red Herring 100 North America Award

Santa Clara, CA, - June 17, 2010 – Netronome, the leading developer of network flow processors, announced today it has been selected as a finalist for the 2010 Red Herring 100 North America award, a prestigious recognition honoring the year's most promising private technology ventures from the North American business region.

The Red Herring editorial team identified the finalists as the most innovative companies from thousands of nominations. The nominees were evaluated on both quantitative and qualitative criteria, such as their technological innovation, management strength, market size, investor record, customer acquisition, and financial health in their respective industries. This unique assessment of potential is complemented by a review of the actual track record and standing of a company, which allows Red Herring to make the list an invaluable instrument for discovering and advocating the greatest business opportunities in the industry.

"This year was especially difficult," said Alex Vieux, publisher and CEO of Red Herring. "Despite the global economic situation, there were many great companies producing truly innovative and amazing products - making it difficult to narrow the pool and select the finalists. Netronome's network flow processors show great promise and they deserve to be among the finalists. We know that this year's finalists will grow into some amazing companies that are sure to go far."

"Netronome is honored to be selected as a finalist by Red Herring given their impressive track record of identifying companies poised to revolutionize the industry," said Niel Viljoen, Netronome's CEO and founder. "Our network flow processors are the first devices to satisfy the need for stateful, 40 Gbps, programmable, content and security processing demanded by modern networks."

Netronome will present at the Red Herring North America Conference in San Diego, June 22-24, 2010. Winners will be announced at a special awards ceremony on June 24 at the event. For more information about the conference, go to <http://www.herringevents.com/RHNA2010/RHNA.html>.

About Netronome

Netronome is a leading developer of highly programmable semiconductor products that are used for intelligent flow processing in network and communications devices. Netronome's solutions include network flow processors and acceleration cards that scale from 10 to 100 Gbps. They are used in carrier-grade and enterprise-class communications products that require deep packet inspection, flow analysis, content processing, virtualization and security. Netronome's products are developed in labs in Santa Clara, CA, Boxborough, MA and Pittsburgh, PA. To learn more about Netronome and its products, please visit www.netronome.com.
