Netronome Named the Fastest Growing Company in Pittsburgh Region

Leading developer of network flow processors receives two awards for company growth by the Pittsburgh Business Times

Pittsburgh – August 31, 2010 – Netronome, the leading developer of network flow processors, today announced that out of 100 finalist companies it has been named the fastest growing company in the Pittsburgh region and the industry leader in the technology category by the Pittsburgh Business Times. The list is a ranking of Pittsburgh's fastest growing, privately-held companies in the region. Companies are ranked by revenue growth between 2007 and 2009. Netronome, based in Cranberry Township, experienced a growth rate of 1,416.67 percent.

"With a growth rate of 1,416.67 percent, Netronome is clearly the fastest growing company in Western Pennsylvania," said Alan Robertson, publisher of the Pittsburgh Business Times. "We congratulate them on the two awards they received and look forward to what the future has in store for them."

Netronome Network Flow Processors are the industry's only processor specifically designed for tight coupling with embedded multicore Intel® and x86 processors. The NFP-3240 brings breakthrough performance to a broad range of demanding network, security and content processing products used in 40 Gbps and 100 Gbps networks. It is the only line of processors backward compatible with the market-leading Intel IXP28XX. Netronome's processors are supported by comprehensive tools, and a broad ecosystem of premier partners and suppliers.

"It is an honor to be named the fastest growing company in Pittsburgh and recognized as the industry leader in technology by the Pittsburgh Business Times," said Niel Viljoen, Netronome's CEO and founder. "Our growth is a testament to our product, and the success of our employees and their dedication to delivering an incredible product to our customers."

Companies named to the Pittsburgh 100 were honored at an awards program on August 26, 2010 at the Duquesne Club. To view the complete list of companies visit: <http://pittsburgh.bizjournals.com/pittsburgh/stories/2010/08/23/daily29.html>.

About Netronome

Netronome is a leading developer of highly programmable semiconductor products that are used for intelligent flow processing in network and communications devices. Netronome's solutions include network flow processors and acceleration cards that scale from 10 to 100 Gbps. They are used in carrier-grade and enterprise-class communications products that require deep packet inspection, flow analysis, content processing, virtualization and security. Netronome's products are developed in labs in Santa Clara, CA, Boxborough, MA and Pittsburgh, PA. To learn more about Netronome and its products, please visit www.netronome.com.
