

Total Performance. Total Control.™

Netronome Powers Secure-24's Next Generation Managed Security Service

Managed security services provider is the first to expand solutions to include protection of threats hidden within encrypted communications

SAN FRANCISCO, RSA CONFERENCE 2008, BOOTH #2627 – April 8, 2008 – Netronome Systems, Inc., a leading developer of high-performance intelligent networking solutions that provide content flow analysis, deep packet inspection and application acceleration for network and security appliances, and Secure-24 Corporation, a premier provider of managed information security and hosting services, today announced that Secure-24 has selected Netronome's SSL Inspector™ Appliance to be included in their next generation managed security services.

Managed security service providers (MSSPs) offer outsourced solutions for security-conscious enterprises, ranging from firewall services, intrusion detection and prevention, content security and web filtering. As secure Internet-based applications and services continue to grow, the amount of encrypted communications to and from the enterprise is also on the rise, creating a blind spot in the network security architecture. As a result, MSSPs are looking for ways to enhance their services to provide the same security benefits for the increasing levels of encrypted communications.

“Netronome's high-performance SSL Inspector enables us to look at all of our network traffic to give us a complete view and identify new threats hidden by encryption,” said Matt Wenzler, vice president of sales for Secure-24. “It is a perfect complement to the other tools we have and are putting in place for our next generation security services. We believe this complete solution allows us to provide a unique and valuable service to enterprises that meets their rapidly evolving security challenges.”

An MSSP is the aggregation point for many enterprise networks, and as a result, the performance requirements of the security appliances that are deployed to enable managed services are very high. Engineered with these requirements in mind, Netronome's SSL Inspector is the industry's highest-performance transparent Secure Sockets Layer (SSL) proxy designed to provide network security devices with line-rate access to the plaintext of SSL-encrypted communications. This ensures that threats, such as spam, spyware and viruses, data theft or leakage and other forms of cyber crime, can be identified when transmitted inside of encrypted SSL flows.

Total Performance. Total Control.™

“In the managed services market, scalability is a critical component for implementing next generation services especially those requiring deep packet inspection,” said Jarrod Siket, senior vice president of sales and marketing at Netronome Systems. “Netronome affords Secure-24 the ability to inspect all of their customers’ network traffic for encrypted threats without any degradation of network performance or service quality.”

Netronome’s SSL Inspector is available now, and currently on display in Netronome’s booth #2627, at the RSA Conference in San Francisco, taking place April 7-11, 2008.

About Netronome Systems

Netronome Systems, Inc. develops open, high-performance application acceleration and flow processing solutions for communications network devices, applications and appliances. Founded in August 2003, Netronome is a privately held corporation. Headquartered in Pittsburgh, Pennsylvania, with North American offices in Santa Clara, California and Boston, Massachusetts, Netronome has international sales offices in Centurion, South Africa; Cambridge, United Kingdom; Shenzhen and Hong Kong, China; and Penang, Malaysia. To learn more about the company and its products, please visit www.netronome.com or call +1.877.638.7629.

About Secure-24, Inc.

Secure-24 is a premier provider of information security and managed hosting services. They specialize in managed hosting and disaster recovery services for enterprise level, business critical applications. Secure-24 focuses on performance, security and high availability and provides services to organizations that need to meet rigorous compliance metrics (SAS-70, HIPAA, Sarbanes-Oxley, GLB, etc.). Their services are provided to financial institutions, healthcare, government agencies, and tier I and II automotive suppliers, as well as OEMs. To learn more, please visit www.secure-24.com or email info@secure-24.com.
